DETAILED ACTION

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on August 1, 2011 has been entered. Claim 1, 4, 6-7, 28, 31, 33-34, 55-57 are pending and are allowed.

EXAMINER'S REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

The invention as claimed is a hard boiled candy composition with partially hydrogenated vegetable oil or saturated fats and Echinacea in a specific ratio of 1.0/0.6 to 1.0/0.15, such that the amount of fat in the confection composition is effective to suppress the tingling sensation or astringency characteristic of Echinacea. Method of suppressing astringency due to Echinacea in a confection by the addition of fat is also claimed.

Closest prior art of record **Carpenter (US 5637344)**, Carpenter teaches a hard boiled candy composition confectionery base comprised of a mixture of at least one sugar (Carpenter, column 6, lines 20-28) and at least one carbohydrate bulking agent (Carpenter, column 6, lines 33-35) which is kept in an amorphous or glassy condition (Carpenter, column 2, lines 55-61), i.e., hard boiled candy.

Carpenter teaches of partially hydrogenated vegetable oils or saturated fats in an amount of less than 5% or more than 3% based on the type of confection (Carpenter, column 9, lines 1-6) where saturated fat may be cocoa butter or butter, however,

Carpenter is concerned with physical coating of rough surface of cocoa powder with fats to provide a smooth mouth feel (Column 1, lines 20-26) and applicant's arguments (Page 7, paragraph 2).

However, Carpenter does not disclose, or even suggest, a hard boiled candy composition comprising Echinacea, having an unpleasant mouth feel in the form of a tingling sensation as required in independent claims 1 and 55. Carpenter also does not explicitly disclose a composition with a ratio of the partially hydrogenated vegetable oils or saturated fats to Echinacea of 1.0/0.6 to 1.0/0.15 as recited in claim 1 or a composition including an amount of one or more partially hydrogenated oils effective to suppress the tingling sensation or astringency of Echinacea.

Carpenter does not teach addition of Echinacea and also does not recognize or address astringency reducing function of partially hydrogenated fats and oils in a hard confection, When a specific ratio of fats/Echinacea is applied, as claimed.

Raymont (AU-A-71904/96), Raymont teaches a lozenge composition (page 3, lines 30-31), i.e., a confection composition, which comprises at least one botanical, wherein the botanical may be Echinacea and Ginko Biloba (page 3, lines 19-20). Thus, confections including hard confections with botanicals, such as, Echinacea, were known in the art at the time of the invention, however Raymont also does not recognize the issue of astringency due to Echinacea and also does not suggest a method of suppressing said astringency by including of partially hydrogenated fats and oils in a hard confection, and a specific ratio of fats/Echinacea, as claimed

Seang (WO 94/05260) merely recognizes that lipids (oils and fats) were known for masking the bitter taste (i.e., unpleasant mouth feel) (Seang, Page 1, line 28, Page 4, lines 6-15, 35-37; Page 5, lines 5-7; Page 6, lines 5-15), but fails to address how fats reduce astringency or tingling sensation of Echinacea when applied in claimed ratio.

Although hard confections were known with botanicals , however, hard confections comprising Echinacea and a specific amount of partially hydrogenated vegetable oils or saturated fats where fats can suppress the astringency due to Echinacea was not disclosed in Prior art. Further, combined teachings of prior art also do not teach that a ratio of fats/Echinacea can be adjusted within 1.0/0.6 to 1.0 /015 in a hard confection enables the fat to effectively suppresses the tingling sensation or astringency due to a specific amount of Echinacea, which makes the claimed invention unobvious over applied prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
